

Respireo SOFT Baby

Supporting his first breath

Developed in collaboration with pediatric pneumologists and intensivists, Respireo SOFT Baby is a mask dedicated to baby from 3 to 12 kgs (6-26 lbs).

Babies faces differ greatly in their shapes from those of adults, in particular with a prominent forehead, no defined nose bridge and a growing & fragile bone structure. All the mask features are designed to address such specificities.

Entirely made of soft silicone, the cushion perfectly fits the facial characteristics of the patient and **ensures minimal pressure points**. With 5 fixation points, the headgear is specifically designed to guarantee **masks stability and perfect seal** around the nose without tightening.

The **mask can be customized** without forehead support to adapt to the most demanding faces.

Respireo **SOFT** Baby

● 5 points headgear

Large straps and the addition of a 5th fixation strap on the forehead ensures homogenous bearing points and stability whatever the pressures or baby's position.

● Silent and diffuse vent system

● Soft and comfortable cushion

With a unique and thin lip to guarantee both air tightness and minimal pressure on the face.

● External port

To adapt to all kinds of non invasive treatments needs (signal measurement, oxygen supply etc.).

● Rotary and flexible tubing at 360°

For a total sense of freedom.

Also available in Non Vented version
